Me

I am a student in my fourth year at the faculty of computer science and management. Since my childhood, I have been fascinated by the newest technologies. It led me, to my programming journey, which started in high school.

Experience

While working at the Courtyard hotel in Ireland during the summer, I had the opportunity to hone my language skills and gain experience in customer service and facility maintenance.

I began my IT career with an internship position at Bonasoft in Wrocław, where I was part of a team responsible for developing a time management app for the company. My duties included working on the backend and mobile aspects of the project.

Following my internships at Bonasoft, I accepted a six month internship position at Lunar Logic in Kraków, where I was subsequently offered a permanent job as an iOS Developer. I have been working in this role to the present day.

Science club

While in college, I joined the Solvro science club and participated in the mobile team, where I contributed to the development of the ToPWR app.

Education

I am currently pursuing an engineering degree with a specialization in Data Engineering at the Wrocław University of Science and Technology.

During my studies, I participated in the Erasmus program and spent six months in Aveiro, Portugal, where I had the opportunity to learn and experience other cultures.

Courses

I also enrolled in an additional course on User Experience offered by ING. I learned their best practices and applied my knowledge in a group project. I worked in a group of three to complete a final work in Figma on a food-related topic.

Participated in an English language skills course at my University, which included a series of meetings focused on improving speaking, reading, and writing skills.
